

New construction manager for Converted Organics

Converted Organics announced today, October 16, that JM Coull has been selected as the construction manager for development of the company's new organic fertilizer manufacturing facility.

The new facility, in Johnston, Rhode Island, will be Converted Organics' third state-of-the-art manufacturing plant in the US.

JM Coull is a full-service construction company based in Maynard, Massachusetts.

"Converted Organics is extremely pleased to prepare for the construction of our third manufacturing facility in the US in two years," said Edward J. Gildea, President of Converted Organics. "This progress reflects the interest in and demand for our organic fertilizer and soil amendment products from the agricultural, professional turf, retail and municipal markets."
